

SpiroChem medicinal chemists are committed to saving you time: They specially designed **SpiroKits** to investigate potential solutions to likely MedChem challenges, which boost structural diversity to support your SAR exploration and generation of new intellectual property.

SpiroKit 2: sp^2 to sp^3 switch

Aryl amines have proven to be particularly disruptive in late-stage drug development because of their propensity to generate reactive and their poor pharmacokinetic properties.

At SpiroChem, we strongly believe that switching from sp^2 systems to conformationally restricted sp^3 systems is a powerful alternative, giving rise to compounds with outstanding intrinsic properties.

SpiroKit 2b: Di-amino ($NH_2/NHBoc$) rigid sp^3 systems

SpiroChem, the future of medicinal chemistry, today.
