

SpiroChem medicinal chemists are committed to saving you time: They specially designed **SpiroKits** to investigate potential solutions to likely MedChem challenges, which boost structural diversity to support your SAR exploration and generation of new intellectual property.

SpiroKit 4 : Azaspiro[3.3]heptane derivatives

Azaspiro[3,3]heptane derivatives are viable and promising surrogates for the piperidine, piperazine, morpholine and thiomorpholine rings, commonly used building blocks in medicinal chemistry.

The incorporation of four-membered heterocycles into druglike scaffolds provides an opportunity to uniquely tune the physicochemical and biochemical properties of the parent compound. Moreover, these structures allow the exploration of novel chemical space.

SpiroKit 4a: Substituted piperidine surrogates

A selection of 2-azaspiro[3.3]heptane derivatives with diversified substituents in position 6 as piperidine surrogates.
